No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6703491

GENERAL INFORMATION:
TITLE OF INVENTION: Nucleic acids and proteins of DroFILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: Patentin Ver. 2.0

SOFTWARE: Patentin Ver. 2.0

Patent No. 6812339
GERERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION:
TITLE OF INVENTION:
WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CL001307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT FILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/241,755
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2272 AAGCAATAATGAAGTATTTAACTCTTTCACTA-CAGTTCTTGCAAGTATGCTATTTAAAT 2330

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISBASE, METHODS OF DETECTION AND USES THEREOF

TITLE SPERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

Rat brain polypeptides, nucleic acids and antibodies, useful for diagnosis and treatment of central nervous system disorders and disorders associated with aberrant apoptosis.

Claim 1; Page 148; 161pp; English.

The invention relates to human homologues of neuronal apoptosis regulated

candidate (NARC) nucleic acid molecules and proteins derived from rat condidate (NARC) nucleic acid molecules. The nucleic acids of the invention are useful for assaying the presence of a mucleic acid molecule and for chromosome mapping. They are also used in gene therapy and condition are useful for treating central antiense therapy. The NARC sequences are useful for treating central conditions are involving aberrant apoptosis, for inducing an immune response and for isolating binding partners. Diseases treated include spleen disorders (e.g. tuberculosis and congestive splenomegaly), lung disorders (e.g. tuberculosis and congestive congopasture's syndrome and bronchial asthma), liver disorders (e.g. planomegaly), lung disorders (e.g. achthma), heart disorders (e.g. viral compasture), and hydrocephalus), heart disorders (e.g. viral companing and myocardial infarction), kidney disorders (e.g. cysts and suppints), testes and epididymis disorders (e.g. cysts and slonders) testes and epididymis disorders (e.g. cysts and congentulonephritis), testes and epididymis disorders (e.g. poncriboea and disorders (e.g. tumours) and pancreatic consumers and poptosis regulated candidate (NARC) 16B DNA ö 420 480 540 540 900 600 9 99 720 720 120 AAAGCAACCATTGTACTCAGTAGAGGAGTATCAGTTCAGTATCGCTACTTCAAAGGGTAC 360 420 480 ACATCATAAAATAAATCCATCAGAATGACACCTTCTCAGGTTGCCTTTGAAATAAGAGGA 180 240 240 AATCCTCAAAATGCTGTGGCTCTTCTTCCAGAGAATGACACAGGTGAAAGCATGCTATGG 300 360 9 9 TTTTTAGAACCAAAGACTATCGGTGGTCCATGTCAAGTGATAGTTCACAAGTGGAGACT AGGGTATCTCCCACTGTACTCCACAAATGTCCAATAGCTTGGAGATATCCTTAATAAGC CATCTACAACCACGATCAATAACCCCTTTAGAAAGCGAAATTATTATTGACGATGAAAA AAAAAATCTAGATTTAAGGGTGAAGCTGACACTAGAAGGCCTGGAGGAAGATGACGATGAT **ACTCTTTTACCAGGAGAGTTTTTGCGATATGTGGAAGCTGTGATGCTTTGGGAAACTGG** TTTGGAATCCACAATGGTGTTGAAACTCTGGATTCTGGATGGCTGACATGTCAGACTGAA ATAAGATTACGTTTGCATTATTCTGAAAAACCTCCTGTGTCAATAACCAAGAAAAATTA GTCGACCCACGCGTCCCGGCGACGCACGGCGGCGGCCCGGTACCTCTGCCCGCGGT ; 0 100.0%; Score 3206; DB 4; Length 3206; 100.0%; Pred. MPI; 2003-058503/05. P-PSDB; ABB84606. Novel isolated programmed cell death-related polypeptide, NARC10 and NARC16, useful for treating disorders associated with abnormal apoptotic process e.g. Alzheimer's disease, cancer, myocardial infarction, stroke.

Claim 1; Fig 4A-C; 123pp; English

This invention describes novel cell death-related polypeptides NARCIO and NARCIG, located on chromosome 4q11-4q21 and which have cardiant, antifilly, immunosuppressive, dermachological, antiinflammatory, cerebroprotective, immunosupressive, anticintlammatory, vasotropic, nephrotropic, nectional antidiabetic, immunosuppressive, cytostatic; thyromimetic, nephrotropic, antidiabetic, immunosuppressive, cytostatic; thyromimetic, nephrotropic, immunosuppressive, cytostatic; thyromimetic, nephrotropic, immunosuppressive, cytostatic; thyromimetic, nephrotropic, immunosuppressive, cytostatic; thyromimetic, nephrotropic, immunosuppressive, cytostatic; thyromimetic, nephrotropic, immunosuppressive, cytostatic, thyromimetic, nephrotropic, immunosuppressive, anticionalizer, hypotensive and can be used to modulate NARCIO or NARCIO polypeptides or cytostatic disease or to associate MARCIO or NARCIO or NARCIO or NARCIO or NARCIO or NARCIO or NARCIO or NARCIO or Collocate associated with increased apoptosis, inhibition of apoptosis or disruptions in cell death, nucleosome assembly, phosphate homeostasis and the programmed cell death, nucleosome assembly, phosphate homeostasis and the programmed cell death, nucleosome assembly, phosphate homeostasis and the reating disorders associated with abnormally phow rate or apoptosis e.g. cancers including follicular lymphomas, carcinomas cell cycle. For regulating cellular lymphomas, carcinomas cell cycle or hypotosis e.g. cancers including spatematc lugus exprhematosus, diabetes, graft rejection, infections or hypotosis e.g. cancers including acquired immunodeficiency syndrome confluency syndrome cellular degeneration, spinal munodeficiency syndrome lymphocyte depletion (including acquired immunodeficiency syndrome confluency and cerebellar degeneration).

Confluency applastic anaemia, spinal muscular atrophy, retinitis any confluency and cerebellar degeneration, spinal muscular atrophy, ischemic cardiomyopathy and valvular hear disease, appatency encouragement and myslodysplastic syndr described in the method of the invention

The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. noncarcian cancer cells as compared to their expression in normal (i.e. noncaced by the markers, antibodies that selectively bind to the encoded by the markers, antibodies that selectively bind to the concaced by the markers, antibodies that selectively bind to the corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention and a method of treating of the patient antisense oligonuclectide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer. Which involves comparing the level of expression of the marker in a patient sample and a normal level of expression of the marker in a control non-ovarian cancer sample. A difference between the captession levels indicates ovarian cancer. The level of expression of the marker corresponds to a secreted protein or to a transcribed contropound to the marker. The presence of protein or protein fragment is detected using an antibody that specifically binds with the protein or protein fragment is assessed by detecting the marker or anneals with the marker or anneals with the marker or anneals with a portion of the polymucleotide which anneals with the marker or anneals with a portion of the polymucleotide which anneals with the marker or anneals with a patient cancer in a marker is also used for monitoring the presence of polymucleotide comprising the marker or anneals with a patient cancer in a marker is also used for monitoring the presence of polymucleotide which anneals with the marker is a bubsequent time, repeating the marker is a polymore or an anneal of the marker is a polymore of the marker or an anneal with a sequence of comparing the level of expression of the marker Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer. Disclosure, SEQ ID NO 21000; 106pp; English.

                                                                                                                                                                             The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polynucleotides of the invention.

The present sequence is of cDNA clone DNA327983 encoding novel human PRO polypeptide PRO83903. The invention provides newly identified and isolated mucleotide sequences encoding polypeptides referred to as PRO polypeptides that are useful in the diagnosis and treatment of immunerelated diseases. Microarray analysis showed that DNA327983 is upregulated 1.5-fold in legional skin as compared to non-lesional skin from psoriasis patients, up-regulated 1.3-fold in colon samples from Crohn's disease patients as compared to normal colon and up-regulated 1.3-fold in white blood cells from rheumatoid arthritis patients as compared to those
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PRO83903; Crohn's disease; rheumatoid arthritis; gastrointestinal-gen.; antirheumatic; antiarthritic; psoriasis; antipsoriatic; gene; ss.

from healthy donors. It is also down-regulated 1.5-fold upon activation of CD4 T cells with CD28 or ICAM and down-regulated 2-fold upon activation of monocytes with LPS. PROB3903 can be used in a claimed method of identifying a compound that inhibits expression of the gene encoding it. The candidate compound is especially an antisense nucleic acid. The PRO POLYPEPTIGE, its antagonist or an antibody that binds the polypeptide are used in claimed methods for the alleviation or diagnosis of rhemautoid arthritis. Crohn's disease and psoriasis. A vector comprising the present nucleic acid can be used to transform a host cell, especially a CHO cell, Escherichia coli or yeast, for production of the PRO polypeptide.

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibit prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; determining whether prostate cancer has metastasized in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GAGCGCTGGCGAGGCACGGACGGCGCCCCGGTACCTCTGCCCGCGGTCCTCGCTCTCT 146

The invention relates to human homologues of neuronal apoptosis regulated candidate (NARC) nucleic acid molecules and proteins derived from rat brain and programmed cell death libraries. The nucleic acids of the invention are useful for assaying the presence of a nucleic acid molecule and for chromosome mapping. They are also used in gene therapy and antisense therapy. The NARC sequences are useful for treating central nervous system disorders and disorders involving aberrant apoptosis, for inducing an immune response and for isolating binding partners. Diseases treated include spleen disorders (e.g. tuberculosis and congestive splenomegaly), lung disorders (e.g. quellu respiratory distress syndrome, Goodpasture's syndrome and bronchial asthma), liver disorders (e.g. jaundice and hepatic failure), infectious disorders (e.g. viral bepatilis), brain disorders (e.g. cerebral oedema, hypertensive encephalopathy and hydrocephalus), heart disorders (e.g. parantsionephritis), testes and epididymis disorders (e.g. genorrhoea and syphilis), skeletal muscle disorders (e.g. tumours) and pancreatic channel apoptosis regulated candidate (NARC) 9B DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1051
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1111
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1171

```

New isolated nucleic acid molecules and polypeptides (e.g. 27411, 23413, 22438, 23553, NARC SC1 or NARC 1) useful for diagnosing, preventing or treating disorders associated with the protein, e.g. cancer, atherosclerosis or AIDS.

Claim 1; SEQ ID NO 32; 260pp; English.

The present invention provides isolated nucleic acid molecules and proteins designated 27411, 23413, 22438, 23578, 25278, 26212, NARC 102, NARC 104, NARC 11, NARC 13, NARC 17, NARC 25, NARC 21, NARC 21, NARC 21, NARC 21, NARC 21, NARC 21, NARC 21, NARC 21, NARC 21, NARC 21, NARC 21, NARC 21, NARC 21, NARC 21, NARC 20, NARC 21, NARC 22, NARC 210, NARC 26, NARC 29, NARC 20, NARC 21, NARC 2

Sequence 2738 BP; 880 A; 450 C; 540 G; 868 T; 0 U; 0 Other;

The invention relates to a novel method for identifying a compound capable of treating a haematological disorder which comprises combining compound to be tested with a specific polypeptide under conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying a compound capable of treating a hematological disorder comprises combining a compound to be tested with a polypeptide related with the disorder under conditions suitable for binding of the test

ø

suitable for binding of the test compound to the polypeptide. The method of the invention has haematological and cytostatic applications and may be useful for identifying compounds for treating a haematological disorder associated with erythroid cells e.g. anaemia and erythrocytosis, bone marrow e.g. leukaemia, platelets e.g. thrombocytopenia and treating and T-cells e.g. neutropenia. The compounds identified may be utilised during gene therapy procedures. The current sequence is that of a human haematological disorder-related cDNA of the 8886666666688888

The present invention describes primer sets for synthesising 5602 full-

[and on ligo-dry primer and an oligonacleotide complementary to the

[c (a) an oligo-dry primer and an oligonacleotide comprises;

[c complementary strand of a polynucleotide which comprises one of the 5602

[an oligonacleotide comprises at least 15 incleotides; or (b) a combination

[c complementary strand of a polynucleotide which comprises a 5'-end

[c complementary strand of a polynucleotide which comprises a 5'-end

[c complementary strand of a polynucleotide which comprises a 5'-end

[c complementary strand of a polynucleotide which comprises a 5'-end

[c complementary strand of a polynucleotide which complementary to a sequence and an oligonucleotide comprising a sequence complementary to a complementary strand of a polynucleotide which comprises a 3'-end sequence, where the complementary to a polynucleotide which comprises a 1'-end sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of sequence of the semplification of the complex of the complex of the sequence of sequence of sequence of sequence of the semplification of the constant invariant of the semplification of the constant invariant of the semplification of the constant invariant of the semplification of the constant invariant of the semplification of the constant invariant of the sequence of the sequence of the semplification of the constant invariant of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the s

```
The present sequence encodes the human glycerophosphodiesterase 25 protein (I). (I) and the polymucleotide sequence encoding it (II) are applicable in the diagnosts and treatment of malignant tumour, haemopathy, HIV infection, immunological diseases and various inflammation. (I) has cytostatic, anti-HIV, immunomodulatory and antiinflammatory activities. (I) is also useful for screening mimics, antiinflammatory activities. (I) is also useful for screening mimics, dentification. The polymucleotide can be used as primers for nucleic acid amplification reaction or as probes for hybridisation reaction, or in producing gene chips or microarrays
                                                                                                                                                                                                                                                                                                                                                                                  Human glycerophosphodiesterase 25 and encoded polynucleotide, applicable in diagnosis and treatment of malignant tumor, hemopathy, HIV infection, immunological diseases and various inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1929 BP; 608 A; 298 C; 372 G; 651 T; 0 U; 0 Other;
